## DETAILS

Name

SYED ASHFAQUR RAHEMAN

Roll Number

KUB23CSE143

## EXPERIMENT

Title

MINIMUM NUMBER OF KEY PRESSES

Description

George has a setup which includes a special keyboard and a monitor , that initially displays 0. The special keyboard has 11 numeric keys (0,1,2,3,4,5,6,7,8,9,00). If he presses 00, the previously displayed value will be multiplied by 100. Whereas, if he presses any other numeric key, the previously displayed value will be firstly multiplied by 10 and then the number on the key will be added to it

You are given a numeric string S. Your task is to help George find and return an integer value, representing the minimum number of key presses to reach the number.

Input Specification:

input: A numeric string s. representing the final number,

Output Specification:

Return an integer value, representing the minimum number of key presses to reach the number.

Sample Input:

100

Sample Output:

2

Source Code:

```
def min_key_presses(s):
    target = int(s) # Convert the string to an integer
    presses = 0

    while target > 0:
        if target % 100 == 0: # Check if the last two digits are '00'
            target //= 100 # Divide by 100
        else:
            target //= 10 # Divide by 10
            presses += 1 # Count the press

    return presses

s=input()
print(min_key_presses(s))
```

RESULT

6 / 6 Test Cases Passed | 100 %
